Nayan Taori

Software Engineer - Backend / Full Stack - Python, React, AWS, Java, Spring Boot,

Seattle, WA - open to relocating

nayantaori14@gmail.com | linkedin.com/in/nayan-taori/ | github.com/NDT2000 | ndt2000.github.io/ | +1 (919) 579-1594

Software Engineer with one year of production experience at Citi and hands-on project experience building Python APIs with FastAPI and Flask, React applications, and PostgreSQL databases. Built AI workflows with schema validation and retries, deployed containerized applications on AWS, and resolved CI dependency and compatibility issues. Master of Computer Science, NC State University.

EDUCATION

North Carolina State University, Raleigh, NC — *Graduated May 2026*
Master of Computer Science | GPA: 3.8/4.0

Veermata Jijabai Technological Institute, Mumbai, India — *Graduated Jun 2023*
Bachelor of Technology in Information Technology

PROJECTS

Personal Finance Tracker | https://github.com/NDT2000/Finance-Tracker — *May 2026 - Present*

- Delivered category-based spending forecasts and per-user data isolation by building a multi-service platform with a Spring Boot core API, FastAPI forecasting service, React frontend and PostgreSQL database; implemented JWT authentication, per-user data isolation, and category-based month-end spending forecasts.
- Wrote unit and integration tests across backend services and frontend; Containerized with Docker Compose and health checks; GitHub Actions CI runs unit and integration tests across all three services.
- Used Cursor for scaffolding and refactors; every agent-generated change reviewed and tested before merge.

CareerLift - AI Career Gap Analysis Platform | https://github.com/NDT2000/CareerLift — *Aug 2025*

- Designed and shipped a TypeScript/React 18 frontend and a Python Flask backend REST API end-to-end, owning the API contracts, authentication, and technical documentation throughout.
- Built agentic AI workflows with schema validation and retry logic for reliable structured output, and deployed the service on AWS via Docker with an Nginx reverse proxy.

AI-Assisted Clinical Notes Workflow | https://github.com/NDT2000/AI-Assisted-Clinical-Notes-Workflow — *Aug 2026*

- Built a Node/React/TypeScript clinical-note review and versioning application with state-machine-driven workflows and role- and ownership-based authorization checks on the client and mock API server.
- Implemented keyboard navigation, debounced autosave, an IndexedDB-backed offline write queue, and three-way conflict resolution; supported browsing 100K synthetic records through cursor pagination and virtualization, developed spec-first with Claude Code: authored the specs and task decomposition, reviewed every agent-generated change, and gated merges on Vitest/RTL coverage.

WORK EXPERIENCE

Application Developer | CitiCorp India Pvt. Ltd., Pune, India — *Jul 2023 - Jul 2024*

- Built an Angular dashboard and Java Spring Boot REST microservices backed by Oracle Database for a client onboarding compliance platform in a regulated banking environment; automated background-check task assignment based on analyst throughput, replacing manual task assignment and cutting team task-completion time by 20%.
- Developed unit tests using JUnit and Mockito for multiple modules, increasing module-wide code coverage from 79% to 82%.
- Worked on technical documentation and led knowledge-transfer sessions for multiple technical and non-technical stakeholders, explaining the module's functionality and implementation.

DevOps Engineer - Independent Study, Expertiza (open source) | NC State University — *Aug 2025 - Dec 2025*

- Collaborated on Docker images for the Ruby application, database, and frontend, enabling local development alongside university VCL environments and reducing student setup time.
- Created and extended GitHub Actions workflows and resolved dependency-version and compatibility issues, reducing failed builds by 25%.
- Implemented a data-anonymization mechanism to protect sensitive information in supplied application data while supporting student development and testing.

Software Developer Intern | Mednet Labs - Oakland Systems, Remote — *Jun 2025 - Aug 2025*

- Collaborated in a two-engineer team to modernize patient-facing React web and React Native mobile applications, contributing to TypeScript migration and UI redesign based on client requirements.
- Built a React Native/TypeScript prototype featuring a unified medical-report screen, improved appointment views, and multi-patient profile management to demonstrate proposed application workflows.

Software Development Intern | Persistent Systems Ltd., Pune, India — *Jun 2022 - Aug 2022*

- Developed a Spring Boot API to generate seat-booking QR codes and store the images in Amazon S3 for subsequent retrieval, supporting a feature deployed for testing with 250+ users ahead of workforce-wide rollout.
- Wrote backend tests and assessed code quality using SonarQube within a Scrum team, participating in sprint planning and daily standups.

SKILLS

Languages: Java, Python, SQL, TypeScript, JavaScript, HTML/CSS
Frameworks & Architecture: Spring Boot, Microservices, REST APIs, React, Angular, FastAPI, Flask, React Native
Databases: PostgreSQL, Oracle, MySQL, MongoDB
Cloud & Tools: AWS (EC2, S3, ECS, App Runner), Docker, Git, GitHub Actions, CI/CD, Linux, Nginx
Testing & Quality: JUnit, Mockito, Vitest, React Testing Library, SonarQube
